## DETAILED ACTION

### Response to Amendment

1. Amendment filed on 6/27/2006 has been entered. After further search and consideration this action issued and made non-final.

### *Allowable Subject Matter*

1. Claims 15-37 allowed.
2. Claims 2, 5-8 and 10-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### *Double Patenting*

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2826

4. Claims 1,3,4 and 9 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 5 and 9 of copending Application No. 11/111870. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both disclose semiconductor memory device comprising: a plurality of memory cells each of which includes a first MOS transistor with a charge accumulation layer and a control gate and a second MOS transistor which has one end of its current path connected to one end of a current path of the first MOS transistor; a plurality of local bit lines each of which connects other ends of the current paths of the first MOS transistors; a global bit line to which two or more of the local bit lines are connected in common; a first switch element which makes a connection between the local bit lines and the global bit line; and latch circuit which is connected to the global bit line and holds data to be written into the memory cells wherein the data is written into the memory cells by exchanging electrons with charge accumulation layer by FN tunneling.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
